

# Our Promise

Infratech has been a pioneer and leader in Infrared technology for more than 50 years. We offer a wide range of products for comfort heat, automotive curing and industrial commercial heat applications.

Infratech uses the latest in manufacturing technologies to offer you the most efficient infrared systems for the lowest cost in the industry. If you are heating a backyard patio or a complex mega resort, Infratech can provide the design, engineering, controls and infrared equipment your property or facility requires.

Infratech is committed to providing high quality, innovative products that exceed our customers' expectations. We have the technology and we have the people to achieve our promise of quality, delivery and price. We look forward to keeping that promise with you.

PRESIDENT

# What is Infrared Heat?

A heated quartz element emits a safe, clean wavelength of light that is only absorbed by solid objects, transferring heat directly to a person, table or floor rather than heating the air.

For this reason, infrared heat can be distributed very evenly, and will not simply "blow away" in windy or drafty conditions. Infratech medium wave quartz element heaters emit a barely discernible, pleasing glow that will not affect the ambience of your gathering – unlike competitive short-wave or halogen electric heaters that produce a very harsh glare or bright-colored light.

# The Infratech Advantage

---

No matter what space you are heating, Infratech will work with you to create a complete solution. We are the experts with the experience and capabilities to help design your project.

- Three-Year Warranty
- UL-Listed for indoor and outdoor use
- Proudly Made in USA
- Versatility
- Infinite Control capabilities
- Made from recyclable materials and operate with zero greenhouse emissions, odors or ultraviolet light
- Our unwavering commitment – customer's total satisfaction!

# Infratech Heaters

Infratech has been the leader in the use of infrared heating technology for more than 50 years. We apply this expertise to our heating systems for personal, commercial, and industrial applications.

We offer you a wide variety of sizes, wattages, voltages, and color options. No matter what your heating goal is, we have the solution!

Infratech Heaters have a smaller, sleeker profile than typical gas infrared heaters.

TYPICAL GAS INFRARED HEATER

INFRATECH W-SERIES AND WD-SERIES HEATERS

INFRATECH C-SERIES AND CD-SERIES HEATERS

INFRATECH SL-SERIES SLIMLINE HEATER

# C-Series Single Element Heaters

- C-Series single element heaters provide the coverage and intensity of heat necessary for optimum comfort.
- Features Include: durable 304 stainless steel construction, recessed installations, and inset mounting brackets for mounting applications up to 10'.
- Fixtures are available in lengths of 33", 39" and 61-1/4".
- C-Series heaters are available in 1500, 2000, 2500, 3000, and 4000 watt models.
- Compatible with custom controls for larger-scale residential or commercial use.
- Choose from brushed stainless steel, our standard colors or select a custom color of your choice.

# WD-Series Dual Element Heaters

- WD-Series dual element fixtures produce more intense heat and can be mounted up to 12'.
- Typically installed with Infratech's custom controls, to vary the electric load for comfortable heat in wide range of conditions. Fabricated from durable 304 stainless steel for years of exterior use.
- Fixtures available in lengths of 33", 39" and 61-1/4".
- Dual element heaters are available in 3000, 4000, 5000, and 6000 watt models.
- May also be installed with Duplex/Stack Switches for a half power/full power option.
- Choose from brushed stainless steel, our standard colors, or select a custom color of your choice.

# Clearance and Dimensions

## CLEARANCE FROM COMBUSTIBLES:

■ Low clearance from combustibles.

■ 6" brackets conform to clearance requirements.

# Infratech Control Options

Infratech is a UL 508 Listed Control Manufacturer with a proven track record in engineering, design, and manufacturing.

- On/Off Switch Assemblies offer a simple, low cost control option compatible with all single element heaters.
- Duplex/Stack Switches are designed for all dual element heaters (max 20 amps per switch).
- The INF Input Regulators are designed for single element heaters (max 15 amps).
- Solid State Relay Control Packages include a Solid State Relay Panel used in tandem with our Zone Analog Controllers (shown below).
- Home Management Relay Panels offer the ability to integrate Infratech's heaters directly into your home management system, so you can get the most automation control out of your living space.
- Universal Control Relay Panels allow you to install and control Infratech heaters using any 120V lighting dimmer of your choice.

# Simple On/Off Switch Assemblies

---

On/Off Switches are designed for use with all single element heaters.

■ Low cost control option for all single element heaters.

■ Range 120/277 VAC (20 amps max per switch).

**Part# 14-4400**

240/277 VAC = 4000 Watts Max  
20 Amps Max

**NOTE:** Replace L2 with Neutral for 120 & 277 VAC Applications

# Duplex/Stack Switch

- Low cost control option for all dual element heaters.
- All assemblies are available in different configurations, including In-Wall or Surface Mount options with or without weatherproof covers.
- The Duplex/Stack Switch offers the ability to turn on and off each element independently, providing half power/ full power capabilities.
- Range 120/277 VAC (20 amps max per switch).

# Infratech Custom Control Options

## Why choose one of Infratech's three custom controls:

- The convenience to adjust heating intensity to maximize energy and ease of operation.
- The ability to create multiple heating zones with one or more heaters in each zone.
- Timer functions for additional safety and energy conservation.
- Relay Panels are custom built to be job specific for your project, with wiring diagrams provided.
- Infratech is a UL 508 Listed Control Manufacturer. All of our custom controls are assigned a UL Listed number and are tested to higher safety standards than the national electric code, before leaving the factory.
- All controls and panels are covered by our Three-Year Warranty – the most extensive in the industry.

# Solid State Relay Control Package

## Consists of a Solid State Relay Panel and Zone Analog Controllers

- Infratech's Solid State Controls are engineered for your individual project and suitable for commercial or residential installations of any size.
- Controls are built to UL 508 listing, which is a higher safety standard than the National Electric Code (NEC).
- Multiple zoning capabilities.
- Heaters are hard wired directly to the Solid State Relay Panel.
- Allows for the option to adjust the intensity of heat of one or more heaters in a specified target area.
- Tested before leaving the factory, and provided with wiring diagrams for each installation.
- All Zone Analog Controllers come with timers.

Solid State Relay Panel

Two Zone Analog Controller w/Digital Timer

# Solid State Relay Panel

---

## For use in conjunction with Zone Analog Controllers

- Infratech's Solid State Panels are UL/CUL Listed and are engineered for your individual project and suitable for commercial or residential installations of any size.
- The Solid State Relay Panel will be fed from the facility's main panel at 125% (includes safety factor) of the full amperage of all heaters.
- There is a maximum of 9000 watts at 240V (max. of 8000 watts at 208V per each Relay in the Panel (50 amps max).
- 5,000 watt and 6,000 watt heaters must be on their own relay.
- Multiple heaters on a single relay are required to be the same wattage.
- Solid State Relay Panels can be built to accept Single Phase or Three Phase power.
- Solid State Relay Panels are designed project specific, tested before leaving the factory, and assigned a UL/CUL Listed Job Number.
- Electrical wiring diagrams are provided for each installation.

# Solid State Relay Panel

## Surface Mount Relay Panels

PART#	DESCRIPTION	EXTERIOR DIMENSIONS
30-4051	1 Relay Panel	16" x 14" x 7"
30-4052	2 Relay Panel	16" x 14" x 7"
30-4053	3 Relay Panel	16" x 14" x 7"
30-4054	4 Relay Panel	16" x 14" x 7"
30-4055	5 Relay Panel	20" x 18" x 7"
30-4056	6 Relay Panel	20" x 18" x 7"

*Above dimensions include 1" heat sinks on each side of the relay panel.*

Relay Panels requiring more than six relays are also available by special order. Please contact customer service for details.

# Zone Analog Controller

## For use in conjunction with the Solid State Relay Panel

- Zone Analog Controllers offer the ability to control one or more heaters in a specified target area.
- All heaters in each zone will be controlled simultaneously.
- Each Zone Analog Intensity Control Knob can control a maximum of three relays from the Solid State Relay Panel.
- The Zone Analog Control is wired to the Solid State Relay Control Panel with a low voltage wire (CAT 5 or comparable).
- The Zone Analog Control also requires 1 amp of 120V from a local circuit.
- Digital Timers include intervals of 15 min, 30 min, 60 min, 2 hours, and 4 hours.

Two Zone Analog Controller w/Digital Timer

PART#	DESCRIPTION	EXTERIOR DIMENSIONS	FACE PLATE DIMENSIONS
30-4045	One Zone Analog Controller w/ Digital Timer	4-1/2" x 6-3/4" x 2-1/2"	5-1/2" x 7-3/4"
30-4046	Two Zone Analog Controller w/ Digital Timer	4-1/2" x 12-1/4" x 2-1/2"	5-1/2" x 13-3/16"
30-4047	Three Zone Analog Controller w/ Digital Timer	4-1/2" x 14-3/16" x 2-1/2"	5-1/2" x 15 "
30-4048	Four Zone Analog Controller w/ Digital Timer	4-1/2" x 17-3/4" x 2-1/2"	5-1/2" x 18-3/4"

*Relay Panels requiring more than six relays are also available by special order. Please contact customer service for details.*

# Zone Analog Controllers

In-Wall Assemblies For Indoor Or Outdoor Protected Areas

2 Zone Analog Controller w/ Digital Timer

**30-4047**  
3 Zone Analog Controller w/ Digital Timer

**30-4048**  
4 Zone Analog Controller w/ Digital Timer

All Zone Analog Controllers also available in white (Special Order)

# Solid State Relay Control Package Placement

## Solid State Relay Placement

- Surface Mount in a well ventilated area.
- Heat Sinks are the 1" deep Aluminum Extrusions on the left and right sides of the panel. It is suggested the power be brought in through the top or bottom of the panel (not from the back).
- Minimum clearance is 6" on each side, 12" from the top and bottom. Additional clearance will be needed if placed in a poorly ventilated area.
- NEMA 4 Rated, which is completely weather resistant.
- Must be accessible per National Electric Code (NEC).

## Zone Analog Controller Placement

- NEMA 12 Rated, will need to be mounted in a well-protected covered area.
- Zone Analog Controllers can be installed in any suitable location that will make it convenient to control the heater(s).
- Custom NEMA 4 housing also available upon special order.

# Solid State Relay Control Package Sample Wiring Diagrams

## Two Relay Panel

## Two Zone Analog Controller

NOTE: USE TWISTED PAIR OR SHIELDED WIRE FOR LOW VOLTAGE HOOK-UP.

# Home Management Relay Panel

## For use in conjunction with your Home Management System

- Infratech's Home Management Control is compatible with top selling systems like Lutron™, Crestron™, Control 4™, and others.
- Interface requires a 0-10V DC Input for streamlined integration and control.
- Choose from a range of programming options through your home management system, including the ability to save preferred heating settings for off-site control via mobile device, and more.

## Three simple steps for Infratech + Smart Home setup

**STEP 1** | Select the Home Management System that provides the best functionality for your lifestyle.\*

**STEP 2** | Install the Infratech heater or heating system that best complements the needs of your space.

**STEP 3** | Connect your Infratech heating control to the Smart control panel, with the assistance of a licensed electrician.

# Universal Control Package

## A complete solution that will work with almost any 120V Lighting

- The exclusive Universal Control Relay Panel allows you to install and control your Infratech heaters using any 120V lighting dimmer of your choice, to coordinate with your home or commercial property's décor.
- A 120V Universal Slide Dimmer and Timer is provided for convenience.
- Create multiple heating zones – an ideal feature for larger or commercial properties.
- Infratech's exclusive Universal Control Relay Panel allows you to remotely control your heating system from a smartphone or tablet via a Wi-Fi/Bluetooth® compatible device that can be purchased to gain this function.

Universal Control Relay Panels requiring more than six relays are also available by special order. Please contact customer service for details.

# Universal Control Relay Panel Sample Wiring Diagram

# Mounting Options

Infratech's heaters can be flush mounted, ceiling mounted, wall mounted, or pole mounted with minimal clearance requirements. UL Listed for as low as 6 feet (minimum 7' suggested) and CUL Listed for as low as 8 feet.

# Flush Mount Installation

## Applicable for the W-Series and WD-Series

- Frames are compatible with the W-Series and WD-Series fitting 33", 39", or 61-1/4" heaters.
- Select an area with a flat ceiling and minimum 2" x 8" studs, where the heater can face straight down when recessed (see warning below).
- The Flush Mount Application requires a 5-sided 5/8" drywall lined pocket with a (1) hour fire rating.
- Infratech's Flush Mount Frames are furnished with a 4' Whip and Hi-Temp Wire Nuts for proper installation.
- The 4' Whip connects to the Heater (inside of the pocket) to a junction box outside of the pocket.
- The provided Hi-Temp Wire Nuts are used to connect the Whip (elbow side) to the J-Box on the back of the heater.
- The Flush Mount Frames can be installed with the edges exposed, or can be covered by a drywall, plaster, stucco or tongue-and-groove ceiling treatment. (1/2" clearance required from ventilation holes).
- Heater/Frame must always be permanently installed and hard wired by a licensed electrician.
- All electrical connections must be in compliance with the National Electric Code (NEC) and or local building codes.

## Installation Examples

**WARNING: FRAME AND HEATERS CANNOT BE FLUSH MOUNTED ON A SLOPED/PITCHED CEILING. FLUSH MOUNT APPLICATIONS MUST ALWAYS BE INSTALLED WITH HEATERS HORIZONTAL TO THE FLOOR ON A FLAT, NON-SLOPED CEILING.**

WD-50	39"	W-39
WD-30	33"	W-33

- For Bronze Body with Stainless Steel Trim add "BR" to part number above.
- For Black Body add "BL" to part number above.
- For Almond Body add "AL" to part number above.
- For Beige Body add "BE" to part number above.
- For Biscuit Body add "BI" to part number above.
- For White Body add "WH" to part number above.
- For Grey Body add "GR" to part number above.
- For Copper Body add "CP" to part number above.

**NOTE:** Frames supplied with Hi-Temp Fixture Whip and High Temp Wire Nuts.

# Proper Flush Mount Installation

## Flush mount your heater in four simple steps

**STEP 1** Frame the pocket that will house the heater with a one hour-rated fire containment box. Note: Frame and heaters cannot be mounted on a sloped/pitched ceiling.

**STEP 2** The junction box must be mounted outside of the lined pocket. You can choose to mount the junction box in a variety of locations, depending upon where you'll be accessing it.

**STEP 3** Install the frame into the finished pocket. You may choose to leave all four inches of the trim exposed, or partially cover it with a decorative ceiling (1/2" clearance is required from ventilation holes).

**STEP 4** Install the heater (heater must face horizontal to the floor) and adjust the tabs to set the heater flush with finished ceiling.

**WARNING: FRAME AND HEATERS CANNOT BE FLUSH MOUNTED ON A SLOPED/PITCHED CEILING. FLUSH MOUNT APPLICATIONS MUST ALWAYS BE INSTALLED WITH HEATERS HORIZONTAL TO THE FLOOR ON A FLAT, NON-SLOPED CEILING.**

For video instructions of proper flush mount installation, visit [www.infratech-usa.com](http://www.infratech-usa.com) or scan.

# W-61 Flush Mount Frame Installation Diagram

Applicable for Infratech's W-Series and WD-Series 61-1/4" Heaters

## Installation Types

### WARNINGS:

- Do not use Surface Mount Brackets.
- This Frame is ONLY to be used on a flat non-sloped ceiling.
- Heater Body must face straight down and be flush with the finished ceiling.
- Frame and Heater cannot be installed on a pitched angle.
- Accessible Junction Box must be installed outside of sealed drywall pocket.
- Must use 5/8" type "X" drywall.
- Must use supplied 4 foot Hi-Temp Fixture Whip and Hi-Temp Ceramic Wire Nuts.
- Please contact factory for longer length Hi-Temp Fixture Whips available for purchase.
- Discard Surface Mounting Brackets provided with Heater and use "L" Brackets.
- Use Licensed Electrician ONLY.

### NOTES:

- Heater suspends (Gravity) by resting on adjustable "L" Brackets in flush mount fixture.
- Mounting holes on Surface Flange to be determined and drilled by Contractor/Installer.
- Coil excess flex into heater cavity.

# W-39 Flush Mount Frame Installation Diagram

Applicable for Infratech's W-Series and WD-Series 39" Heaters

## Installation Types

### WARNINGS:

- Do not use Surface Mount Brackets.
- This Frame is ONLY to be used on a flat non-sloped ceiling.
- Heater Body must face straight down and be flush with the finished ceiling.
- Frame and Heater cannot be installed on a pitched angle.
- Accessible Junction Box must be installed outside of sealed drywall pocket.
- Must use 5/8" type "X" drywall.
- Must use supplied 4 foot Hi-Temp Fixture Whip and Hi-Temp Ceramic Wire Nuts.
- Please contact factory for longer length Hi-Temp Fixture Whips available for purchase.
- Discard Surface Mounting Brackets provided with Heater and use "L" Brackets.
- Use Licensed Electrician ONLY.

### NOTES:

- Heater suspends (Gravity) by resting on adjustable "L" Brackets in flush mount fixture.
- Mounting holes on Surface Flange to be determined and drilled by Contractor/Installer.
- Coil excess flex into heater cavity.

# W-33 Flush Mount Frame Installation Diagram

Applicable for Infratech's W-Series and WD-Series 33" Heaters

## Installation Types

### WARNINGS:

- Do not use Surface Mount Brackets.
- This Frame is ONLY to be used on a flat non-sloped ceiling.
- Heater Body must face straight down and be flush with the finished ceiling.
- Frame and Heater cannot be installed on a pitched angle.
- Accessible Junction Box must be installed outside of sealed drywall pocket.
- Must use 5/8" type "X" drywall.
- Must use supplied 4 foot Hi-Temp Fixture Whip and Hi-Temp Ceramic Wire Nuts.
- Please contact factory for longer length Hi-Temp Fixture Whips available for purchase.
- Discard Surface Mounting Brackets provided with Heater and use "L" Brackets.
- Use Licensed Electrician ONLY.

### NOTES:

- Heater suspends (Gravity) by resting on adjustable "L" Brackets in flush mount fixture.
- Mounting holes on Surface Flange to be determined and drilled by Contractor/Installer.
- Coil excess flex into heater cavity.

# Ceiling and Wall Mount Applications for C-Series, CD-Series, W-Series, and WD-Series Heaters

Our low profile heaters are suitable for indoor and outdoor installations, and offer a pleasing, streamlined look due to low clearance requirements.

Mounting Brackets are included with all Infratech Heaters

# Ceiling and Wall Mount Applications for SL-Series Slimline Heaters

The SL-Series Brackets are designed for two positive stop positions.

## SHALLOW ANGLE

For a Shallow Angle Installation (30° off the wall) mount both brackets with the "longer length stop" positioned on the bottom.

## STEEPER ANGLE

For a Steeper Angle Installation (45° off the wall) mount both brackets with the "shorter length stop" positioned on the bottom.

Mounting Brackets are included with all Infratech Heaters

# Pole Mount Installation

8' Pole with 12" X 12" Base. Includes both Pole Mount and Cross Bar.  
Available with or without Cutout Switch for Control Options.

## POLE MOUNT INSTALLATION FOR W/WD-SERIES HEATERS

PART#	DESCRIPTION
22-1250	W-39 Pole Mount - White
22-1255	W-61 Pole Mount - White

Also available in custom sizes and custom colors.  
Please contact customer service for details.

# C-Series, CD-Series, W-Series, and WD-Series Color and Finish Options

- Infratech's heaters and flush mount frames are available in a brushed stainless steel finish, along with the eight (8) standard color options shown.
- You may also choose your own custom finish color, that complements your wall or ceiling treatments (see page 3).
- The Standard Colors are powder coated over the stainless steel and baked to achieve a long lasting, fade and corrosion resistant finish.

WHITE

BISCUIT

ALMOND

BEIGE

BLACK

BRONZE

GREY

COPPER

**NOTE:** Flush Mount Installations require powder coating the frame, rather than the heater itself to achieve the desired look.

(ADDITIONAL CHARGES APPLY)

# SL-Series Color and Finish Options

---

Slimline Heaters can be ordered in the following configurations to better coordinate with your environment.

SILVER

## **Stainless Steel**

The Slimline SL-Series comes with a stainless steel trim over a stainless hue anodized aluminum body/mounting brackets.

ALL BLACK  
SLIMLINE SHADOW™

## **All Black Slimline Shadow™**

Infratech's All Black Slimline Shadow™ has a powder coated black trim over black anodized aluminum body/mounting brackets. To order the All Black Slimline Shadow™ add "BL" to the end of the model part number.

Pricing is the same for all SL-Slimline Series.

# Custom Colors

---

## Virtually Any Custom Color Available

- Applicable for the C-Series, CD-Series, W-Series, and WD-Series Heaters and Infratech's Flush Mount Frames.
- Wide spectrum of colors, textures, and finishes available. Contact Infratech for a copy of Tiger Drylac's color chart to make your selection.
- Once selecting a Tiger Drylac's RAL Number, please contact customer service for a custom quote.
- All custom color orders are non-refundable, and have an approximate lead time of 3-4 weeks.

# Heat Your Space in 3 Easy Steps

Infratech offers the widest range of fixtures, installation and control capabilities to create comfortable spaces.

**STEP**  
**1** | Measure the Area

**STEP**  
**2** | Select the Heaters

**STEP**  
**3** | Choose the Controls

# STEP 1: Measure The Area

Determine the approximate measurements and mounting heights of the area you want to heat (include length, width, and height).

## STEP 2: Select The Heaters

Select the heater(s) that will work both functionally and aesthetically for your space. Consider factors such as size, number of heaters, colors, and mounting options.

**NOTE:** Indoor or well-protected environments will generally exceed average coverage. Heaters may provide less than average coverage in extremely cold or windy conditions.

# STEP 3: Choose The Controls

Choose the control option that works best for your desired control capabilities or budget. Options include value control installations or infinite adjustment with solid state controls.

### Solid State Control Package

### Universal Control Package

### Home Management System

### Value Controls

Simple On/Off Switch

INF Regulator

Duplex/Stack Switch

## Why choose an electric heater, rather than a gas heater?

Simply put, electric heaters look better, are more efficient and are easier to operate and maintain. Electric heaters are over 90% efficient and are perfectly safe for use indoors or outdoors. They are also economical to operate and require little maintenance beyond periodic cleaning. Unlike gas heaters, there are no valves, ignition components, moving parts or burners to maintain or repair. In addition, electric heaters produce no sound, odors or toxic emissions.

Electric heaters also offer added mounting and installation options. They may be flush mounted into a standard 8' ceiling using our flush mount frame. When surface mounted, they hang less than 9-1/2' from the ceiling. The most commonly used overhead gas heater requires a minimum ceiling height of almost 10' and, when mounted properly, will hang almost 24' below it.

An electric heater is also easier to use. Enjoying electric comfort heat is as easy as flipping a switch. You can adjust the intensity of an electric heater infinitely from zero to 100% of power. By contrast, gas heaters only produce infrared energy on their highest possible settings.

## How can I estimate my cost of operation?

Electric heaters are economical to operate. It is easy to estimate your operating cost by multiplying the total kilowatts by your local power rate for a "kilowatt hour" (kwh). Standard power rates vary from market to market. Your rate should appear on any monthly utility statement. For example, a typical 3,000 watt (3 KW) heater, at full power, would cost 39¢ per hour based on a utility rate of 13¢ per kwh. Also keep in mind that your electric heater has a lower acquisition cost than a standard gas heater.

## How do I determine how many heaters I will need?

Please visit the "Getting Started" page for simple steps to help you select the right heaters and control options for your space. For professional assistance, you may be required to submit some basic information about your area to be heated. We are happy to help you design a system that will satisfy your needs and your budget.

## How small of a heater can I use?

Always choose a heater size with the appropriate heat output for the mounting height and area to cover. By selecting a smaller unit, you may require more heaters to get the same amount of heat output. If you are choosing a dual element unit for aesthetic purposes, you will be concentrating more heat into a tighter space. Again, this may mean that you will possibly require more fixtures to provide total coverage of your area. Patio heating is often a compromise between functionality and finding the desired look.

## How much heat should I expect?

At their Food Services Testing Center, Pacific Gas & Electric has determined that a good patio heat installation (gas or electric) will provide between 3-7° of perceived heat at 60° F ambient conditions. Test results determined that more than 7° is too warm to sit in for extended periods. Colder or draftier areas may require more heat; protected or warmer areas may require less. Every installation will vary, along with our customers' expectations.

## Does an electric heater cost more than a gas unit to operate?

Operating costs vary by region. Nationwide, electric heaters are less expensive than propane, and are competitive with natural gas. Depending upon the total hours of usage, electric heaters normally have a much lower cost of ownership when factoring in purchase price and maintenance needs. Basically, this means that while it can cost more per hour to operate an electric unit in some areas, it typically takes 7-10 years to save enough money operating on gas to recover the substantially higher purchase price-not to mention cost of regular maintenance for a gas heater.

# Frequently Asked Questions

---

## Electrical

### Can I run my heaters on only 120 volts of power?

Using a 110/120-volt heater (1,500 watts maximum) is fine for enclosed areas like garages, indoor work areas or outdoor spaces no larger than 5' x 5'. When heating larger areas, running a dedicated 110/120-volt circuit is not practical or economical. A 240-volt circuit will require the same amount of wiring, will heat substantially larger areas with greater comfort, and will simply require two spaces in the breaker panel, rather than one.

### What's the difference between 208-volt and 240-volt power?

Many new homes and businesses are supplied with 208-volt power, as opposed to the more familiar 240-volt option. It is very important to determine your power voltage before ordering and installing a heater. A 240-volt heater on 208 volts of power will only produce about 60% of the desired infrared energy. Contact the marketing department of your local utility or consult a licensed electrician to determine the actual voltage at your property location. Infratech heaters are available in single and dual element 120, 208, 240, 277 and 480-volt models.

### What are your safety certificates?

All Infratech heaters are Underwriters Laboratories (UL) and Canadian Underwriters Laboratories (cUL) Listed under File E 29825. We are NZ/Australia and CE Listed under Wakefield Laboratories File NSW 21732. All Infratech fixtures are also certified IP X4 rated.

## Product

### Should I purchase an Infratech Solid State Control Package?

Infratech solid state controls give you the most efficient and versatile form of control for your heaters. While other lower cost controls are available, if your space calls for larger heaters or multiple heaters, solid state controls quickly become your best choice for a quality installation. Contact us and let our qualified staff help you configure the best heaters and controls for your project.

### How long can I expect an Infratech quartz element to last?

Infratech quartz elements are rated for up to 5,000 hours of use. In many installations you may enjoy your heater for years before a replacement would be needed. Always refer to your specific heater manual for specific instructions, and be sure to disconnect the power to your heater before attempting to change an element.

### Are quartz elements better than “short wave” halogen elements?

If you are concerned about ambience, the appearance of your décor and creating a more relaxing environment, Infratech infrared quartz elements are always the best choice. Infratech quartz elements provide comfortable medium wave heat. Competitive products with short wave halogen elements produce more intense heat while emitting very bright and harsh-colored light. By contrast, Infratech medium wave elements effectively heat your space, while providing a soft, warm glow that is practically unnoticeable.

## Smart Home Installation

### Can I operate Infratech heaters from home lighting controls or home management systems?

Yes. There are two ways to integrate our solid state controls into your home management system. One permits on/off and timer functionality only, by switching the 120-volt power to the analog remote. The second way allows for full integration with our controls designed to accept a 0-10-volt DC signal from our Home Management System, to vary the intensity of the heaters. Contact us for a complete consultation.

# Frequently Asked Questions

---

## Universal Control Panel

### What type of dimmers can I use with the Universal Control Panel?

The Universal Control Panel can use any 0-120VAC dimmer, including smart dimmers to integrate with your app and Bluetooth capable devices.

### Do I need to feed the 0-120VAC dimmer with power?

Yes. Provide power to the dimmer to signal the switch leg to go to the control signal terminal strip in the Universal Panel. Generally power is pulled from a circuit close to the dimmer.

## Slimline

### Can I recess a SL-Series heater?

No. The SL-Series heater housing operates at a significantly higher temperature than the W-Series or C-Series fixtures due to the narrow profile and tight clearances to the heating element. The SL housing would exceed safe operating temperatures for wiring with restricted air circulation.

### Can the SL-Series heater be painted or powder coated?

No. The SL-Series heater housing is anodized aluminum. It is available in a silver, stainless colored finish or an almost black anodized finish. Paint or powder coating interferes with the T-slot, and reduces heat dissipation. This layer of paint "insulation" increases the operating temperature of the housing beyond acceptable limits.

### Why has my Slimline reflector distorted or warped?

There are two possible reasons. First and most common would be because the safety grill is not properly installed in the channel, between the reflector returns, and under the stainless trim ring. The grill needs to be in the channel to hold the reflector properly placed.

The reflector is designed to expand and contract as the housing heats and cools at a different rate. The reflector has slotted holes on each end. If the screws securing the end are over tightened (tight to the bottom) the reflector can deform with the grill in place. During assembly the end screws are backed out, from ½ to 1 full turn to allow room for expansion. This is important to know should you need to replace a reflector for damage or maintenance.

### Will the SL-Series heater generate the same heat as a comparably rated W-Series heater?

Yes, they will have the same heat output. A watt = watt. The difference is in the styling, and construction, but with the narrower design of the SL units, the heat pattern is slightly more concentrated towards the center.

### Do I need to use the supplied mounting brackets?

No. The installer can use any desired bracket that meets the minimum clearance requirements. You can use a ¼" hex bolt head in the T-slot if attaching to structural tubing.
